Expected graduation: February 2028 **Availability:** 13-week full-time internship from July 2027

Education

Warsaw University of Technology Oct 2024 – Feb 2028 (expected)
Bachelor of Engineering in Computer Science and Information Systems *Warsaw, Poland*

- Faculty of Mathematics and Information Science
- **Relevant Coursework:** Algorithms and Data Structures, Object-Oriented Programming, Operating Systems, Database Systems, Numerical Methods
- Member of the Faculty Student Council; delegate to the Finance and Economic Committee

Experience

Campus Ambassador Feb 2026 – Present
JetBrains *Warsaw, Poland*

- Led the JetBrains student community at WUT, organising 5+ technical workshops, lectures and events on modern software development tools, reaching 500+ students
- Acted as the primary point of contact between the university and JetBrains; advised peers on professional tech stacks and career opportunities
- Collaborated with local student organisations to co-host knowledge-sharing events

High School Intern May 2023 – Aug 2023
Cyfrowe Centrum Serwisowe *Piaseczno, Poland*

- Co-developed an inventory management application for service parts, replacing three separate services with one and significantly improving efficiency
- Designed database schemas and implemented backend logic in **Python** (Flask) and **SQL Server**, improving the overall system architecture
- Tech stack: React, JavaScript, Python, Flask, Docker, SQL Server

Projects

Interactive Backup Wizard | *C, Linux POSIX API, inotify, multiprocessing* GitHub

- Developed a concurrent Linux backup utility in **C** using `fork()` for non-blocking directory synchronisation
- Integrated the `inotify` API for real-time filesystem monitoring, recursive traversal and dynamic symlink handling
- Optimised data restoration by comparing file sizes and `mtime` to minimise redundant disk I/O

Multiplayer RPG Console Game | *C#, .NET, TCP/IP* GitHub

- Engineered a client-server RPG with an authoritative server handling up to 9 concurrent **TCP** connections, using length-prefixed JSON message framing
- Implemented **Prim's algorithm** for procedural dungeon generation and **BFS** for enemy AI vision, hearing and pathfinding
- Applied 10 design patterns (e.g. Command, Strategy, Decorator, Abstract Factory, Observer) and moved theme content to JSON, so new items and enemies require no code changes

Technical Skills

Languages (proficient): C, C#, C++, SQL
Languages (familiar): Python, JavaScript, MATLAB, Rust
Technologies: Linux/Unix, POSIX API, Git, Docker, SQL Server, Flask, Node.js, React
Core Competencies: Data Structures & Algorithms, Concurrency, Networking (TCP/IP), Object-Oriented Design, Numerical Methods
Spoken Languages: Polish (native), English (C1)

Interests

Running, orienteering, cartography (drawing orienteering maps for competitions)
